

# ATCC Genuine Cultures<sup>®</sup> Mycology Biomedical Strains

The ATCC Mycology Collection has approximately 330 species of biomedical fungi and yeasts, with a total exceeding 2000 isolates. As with all of the ATCC Genuine Cultures<sup>®</sup>, they feature:

- **Proprietary system for managing strain stocks** that minimizes subculturing. Each vial is a minimal passage descendant of the original material and has been handled only by ATCC.
- **Meticulous protocols for preservation and storage.** Products are carefully preserved and stored safely and effectively to ensure optimal viability.
- **Robust quality systems.** ATCC is ISO 9001:2000 certified and ISO 17025:2005 and ISO Guide 34 accredited.
- **Expert mycologists.** Our team stays abreast of the latest trends in infectious disease and microbial detection so our customers have the reagents they need.
- **Quality related products.** Freeze media and genomic DNA purified from ATCC Genuine Cultures round out the offering of products.
- **Over 80 years of experience.** ATCC is a trusted scientific resource, and our customer and technical service teams know the ins and outs of distributing and supporting microbes.

To find all of the designations available, search the ATCC online catalog by the organism name to locate related strains. For some fungi and yeasts, both anamorph and teleomorph names are listed to assist in your search.
