

Product Sheet

Ruminococcus lactaris (ATCC® 29176™)

Please read this **FIRST**

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Ruminococcus lactaris* (ATCC® 29176™)

Description

Designation: VPI X6-29
Deposited Name: *Ruminococcus lactaris* Moore et al.

Propagation

Medium
ATCC® Medium 260: Trypticase soy agar/broth with defibrinated sheep blood
ATCC® Medium 1490: Modified chopped meat medium

Growth Conditions
Temperature: 37°C
Atmosphere: Anaerobic gas mixture, (80%N₂-10%CO₂-10%H₂ or 100% N₂)

Propagation Procedure

1. Open vial according to enclosed instructions.
2. Perform all steps under anaerobic conditions. (*see below*)
3. Aseptically transfer 0.5 mL of Medium #1490 to the vial and rehydrate the freeze-dried pellet. Immediately place the rehydrated pellet under a stream of oxygen-free sterile gas. Transfer the suspension back into the tube of broth and transfer 0.5 mL to a second broth tube. Inoculate a plate of non-selective medium with 0.1 of the culture. Inoculate a non-selective tube of broth.
4. After one or two days, growth should be evident by turbidity through out the broth. Once growth has been established, the culture should be transferred to fresh broth every 24 to 48 hours.
5. This culture is sensitive to oxygen; therefore steps should be taken to avoid exposure to oxygen. When the culture exhibits good growth it will remain viable for up to one week if stored at 4°C under anaerobic conditions.

ANAEROBIC CONDITIONS:

- Tubes of media are placed under a gassing cannula system hooked to a source of oxygen free gas.
- All transfers are performed while the test tubes are on the cannula system with a gentle stream of oxygen-free gas flowing through the system.
- As the test tubes are removed from the cannula system each is sealed with butyl rubber stopper thus maintaining the anaerobic headspace.

Notes

Colonies on Brucella agar plates are glistening, size-variable, smooth, low convex, circular, and entire. Additional information on this culture is available on the ATCC® web site at www.atcc.org.

References and other information relating to this product are available online at www.atcc.org.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this strain. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.

Disclaimers

This product is intended for laboratory research purposes only. It is not intended for use in humans. While ATCC uses reasonable efforts to include accurate and up-to-date information on this product
