Description

Designation: NRRL B-11177

Deposited Name: *Photobacterium phosphoreum* (Cohn) Beijerinck

Product Description: ATCC® 49387-MINI-PACK™ consists of 6 ready-to-use vials of ATCC® 49387™ frozen in 200 µL of glycerol stock, eliminating the need to rehydrate and culture the strain prior to use. Each vial is provided with a 2-D barcode for easy storage and tracking, as well as peel-off labels for fast and reliable recordkeeping.

Propagation

Medium

ATCC® Medium 101: Photobacterium broth

Growth Conditions

Temperature: 15°C

Atmosphere: Aerobic

Propagation Procedure

Frozen mini-cryovials packed in dry ice should either be thawed immediately for use or stored at or below -70°C until the expiration date printed on the label. Storage at -20°C may affect the growth and viability of the culture.

1. Thaw the bacterial strain upright using gentle agitation in a 25°C to 30°C water bath. Thawing will be rapid; approximately 2-3 minutes or until all ice crystals have melted.
2. Immediately after thawing, wipe down the mini-cryovial with 70% ethanol and aseptically transfer the entire contents to a 5-6 mL tube of #101 broth.
3. Incubate the broth at 15-18°C for 4-5 days. This strain needs to establish good growth in broth culture before additional transfers are made.
4. After growth has been achieved, transfer can be made to secondary tubes of broth, slants, and plates. Additional incubation may be required for growth on solid media.
5. Discard the empty vial. Do not refreeze any unused portion as it will result in a loss of viability.

Notes

This strain may be temperature sensitive. You should use chilled media for rehydration or the cells may be damaged. Place tubes at the proper temperature immediately. Temperatures above 20°C should be avoided. Store or transfer immediately. Do not let them stand at room temperature.

This strain will grow on Marine Broth 2216 (BD 279110) and Marine Agar 2216 (BD 212185), but Photobacterium Medium is recommended for demonstrating luminescence. To check for luminescence, inoculate a slant, leaving cap loose. Incubate at optimal temperature until growth is observed. Then, hold in the dark for 10 minutes. If no luminescence is detected, reincubate and check again after 24-48 additional hours. When maximum luminescence is obtained, stopper tightly.

Additional information on this culture is available on the ATCC®C web site at www.atcc.org.

Biosafety Level: 1

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

ATCC® products are warranted for 30 days from the date of shipment, and this warranty is valid only if the product is stored and handled according to the information included on this product information sheet. If the ATCC® product is a living cell or microorganism, ATCC lists the media formulation that has been found to be effective for this product. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this product. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
