

Product Sheet

Anaerobiospirillum succiniciproducens (ATCC® 53488™)

Please read this **FIRST**

Intended Use

This product is intended for research use only. It is not intended for any animal or human therapeutic or diagnostic use.

Citation of Strain

If use of this culture results in a scientific publication, it should be cited in that manuscript in the following manner: *Anaerobiospirillum succiniciproducens* (ATCC® 53488™)

Description

Designation: S411

Deposited Name: *Anaerobiospirillum succiniciproducens* Davis et al.

Propagation

Medium

ATCC® Medium 1536: Anaerospirillum medium

Growth Conditions

Max Temperature: 37.0°C

Min Temperature: 35.0°C

Atmosphere: Anaerobic

Propagation Procedure

1. Open vial according to enclosed instructions.

2. Under anaerobic conditions, withdraw 0.5 ml from a single tube (5 to 6 ml) of #1536 broth. Rehydrate the pellet.

3. Aseptically transfer this aliquot back into the broth tube. Mix well.

4. Use several drops of the suspension to inoculate an additional tube of broth and slants. This strain has been found to be sensitive to the cryoprotectant, so transfers should be made immediately from the original tube. Streak a blood plate and incubate aerobically to check for contamination.

5. After three to four days incubation under the recommended conditions, growth should be evident by turbidity through out the broth. When examined microscopically, the cells appear as single rods and pairs. Once growth has been detected, the culture should be transferred to fresh broths and slants. Growth should occur within 48-72 hours.

6. This culture is very sensitive to oxygen, all steps should be taken to avoid exposure to it.

ANAEROBIC CONDITIONS:

Anaerobic conditions for transfer may be obtained by either of the following:

- Use of an anaerobic gas chamber, or
- Placement of test tubes under a gassing cannula system hooked to anaerobic gas.

Anaerobic conditions for incubation may be obtained by any of the following:

- Loose screw caps on test tubes in anaerobic chamber,
- Loose screw caps on test tubes in an activated anaerobic gas pack jar, or
- Use of sterile butyl rubber stoppers on test tubes so that an anaerobic gas headspace is retained.

Notes

Always use freshly prepared pre-reduced media or pre-reduced media that has been previously prepared but stored under anaerobic conditions. Resazurin in the media is a color indicator for anaerobic conditions. Observance of pink color in medium before use or during incubation shows anaerobic conditions have not been met and oxidation has occurred. Medium should be discarded.

Additional information on this culture is available on the ATCC web site at www.atcc.org.

References

References and other information relating to this product are available online at www.atcc.org.

Biosafety Level: 2

Appropriate safety procedures should always be used with this material. Laboratory safety is discussed in the current publication of the *Biosafety in Microbiological and Biomedical Laboratories* from the U.S. Department of Health and Human Services Centers for Disease Control and Prevention and National Institutes for Health.

ATCC Warranty

The viability of ATCC® products is warranted for 30 days from the date of shipment, and is valid only if the product is stored and cultured according to the information included on this product information sheet. ATCC lists the media formulation that has been found to be effective for this strain. While other, unspecified media may also produce satisfactory results, a change in media or the absence of an additive from the ATCC recommended media may affect recovery, growth and/or function of this strain. If an alternative medium formulation is used, the ATCC warranty for viability is no longer valid.
