Adjust final pH to 7.3, +/- 0.1, with Na<sub>2</sub>CO<sub>3</sub>/HCl. Boil medium and cool under 90% N<sub>2</sub>, 10% CO<sub>2</sub>. Dispense medium anaerobically using the same gas mixture. For destruction of possible indigenous thermophilic spores, autoclave basal medium, yeast extract and reducing agent for 45 minutes at 121C. Aseptically add yeast extract to cooled basal medium to a final concentration of 0.1%.

Add reducing agent just prior to inoculation.
