

Vibrio harveyi Panel

ATCC *Vibrio harveyi* Panel (ATCC® MP-6™) is comprised of 9 strains for use as a non-pathogen, two-component regulatory system in quorum sensing. The ATCC *Vibrio harveyi* Panel provides a wild-type strain, BAA-1116, strains that are mutant for production or detection of AI-1, AI-2, or both, as well as strains that are either constitutively bioluminescent (bright) or dark. A dim mutant, BAA-2363, is also included. The table below provides phenotypic responses of strains used in the two-component system, as observed during additional testing by ATCC.
